

Presentation in Beamer

Introduction to presentation in LaTeX

Jan Kohout

July 23, 2013 in Nové Hradý

Outline

- 1 What is LaTeX and Beamer?
- 2 Motivation
- 3 What you need?
- 4 Philosophy
- 5 Code examples
- 6 Conclusion
- 7 Reference

What is LaTeX and Beamer?

What is LaTeX?

LaTeX

LaTeX is a **document markup language** and document preparation system for the **TeX** (typesetting program) - it creates final *pdf document*.

Uses ***.tex** file - created using some form of text editor or WYSIWYG.

Name origin

From capital Greek letters tau, epsilon, and chi, as the name of TeX derives from the Greek - means skill, art, technique)

Pronounced

/'la : tɛx/, */'l : tɛk/or/'leitɛk/*.

[en.wikipedia.org/wiki/LaTeX]]

Figure 1 : Latex.

[socialtrailriders.org]

Figure 2 : LaTeX logo.

What is Beamer?

Figure 3 : A beam.

[cdni.wired.co.uk]

Beamer

- ✗ a English boy name. The meaning of the name is 'trumpeter' Beamer, Bemeere.
- ✗ American slang for a BMW car.
- ✓ LaTeX class for creating slides for presentations.

Translation to czech

Beamer = *rychlý nadhoz, válové snovadlo* (?!).

Motivation

Why use Beamer and LaTeX?

Why use Beamer and LaTeX?

- **presentation under control**
 - not as PowerPoint, that do what he want (typically positioning)
- **easy changeable**
 - one line change look of the whole presentation

Et bachelorprojekt om roterende vand

Et heldigt tilfælde

Thomas R. N. Jansson

Niels Bohr Institute
University of Copenhagen

9 November 2007

Thomas R. N. Jansson Et bachelorprojekt om roterende vand

Figure 4 : Example of Beamer presentation.
[tjansson.dk/]

Advantages

Figure 5 : Beamer!
[chennaisocialmedia.com]

- **uniform** - format and positioning according to typographic rules
- **vector images** - able to insert
- **images** - easy to change image by changing source file
- **resizing image** - no problem
- **math, code, special chars** - easy to write math expression
- **source code** - highlighting source codes
- **outlines, navigation, reference, citation** - created automatically
- **professional looking, macros, templates...**

Disadvantages?

For effective work it is good to know some commands.
 Sometimes is a problem to find where error is.
 Compiling, compiling, compiling...

```

248 \subsection{Motivation}
249 \frame{
250 \frameheader{\insertsubsection}
251 \begin{alertblock}{Why use Beamer and LaTeX?}
252 \begin{itemize}
253 \item \textbf{presentation under control} - not as
254 \item \textbf{PowerPoint, that do what he want}
255 \item \textbf{easy changeable} - one line change look
256 \item \textbf{of the whole presentation}
257 \end{itemize}
258 \end{alertblock}
259 \begin{columns}
260 \column{7cm}
261 \begin{block}{Another advantages}
262 \begin{itemize}
263 \item \textbf{uniform} - format according to
264 \item \textbf{typographic rules}
265 \item \textbf{math, code, special chars} - easy to
  
```

```

41 \usepackage{courier}
42
43 \usepackage{bera} % change font
44 \usepackage{color}
45 \definecolor{lightgrey}{rgb}{0.99,0.99,0.99} % defining color for listing
46 \definecolor{darkgreen}{rgb}{0,0.6,0} % defining color for listing
47 \definecolor{darkred}{rgb}{0.8,0,0} % defining color for listing
48 \definecolor{darkblue}{rgb}{0,0,0.8} % defining color for listing
49 \definecolor{darkcyan}{rgb}{0,0.8,0.8} % defining color for listing
50 \breaklinestrue,

What you need?

Overview

MikTeX

Distribution of TeX - MikTeX,
<http://miktex.org/>.

Instalation about 400 MB.

Compile *.tex file into *.ps or
 *.pdf.

Editors

Some text editor (*TexStudio*,
TexMakerX...) or WYSIWYG
 editor (*Bakoma*) and pdf/ps
 viewer (*SumatraPDF*).

Figure 10 : TeX?

[comicbookdaily.com]

MiTeX instalation

MikTeX - instalation in czech with image wizard

<http://latex.feec.vutbr.cz/cz/latex/lokalni-instalace/>

<http://latex.feec.vutbr.cz/cz/latex/diskuze/>

or

<http://support.dce.felk.cvut.cz/lab26/download/LaTeX/TeXinst.pdf>

MiKTeX.3. Zvolte umístění instalace programu a další parametry instalace. Viz obrázky. Jako základní formát stránky nastavte **A4** a zvolte „**Ask me first**“ u budoucí instalace chybějících balíčků. Spusťte samotnou instalaci. Trvá relativně dlouho, kopíruje se a rozbaluje totiž spousta malých souborů.

Figure 11 : <http://latex.feec.vutbr.cz>

TeXStudio

Installation

<http://texstudio.sourceforge.net/> - portable version. According me best LaTeX editor - macros, help, integration with SumatraPDF.

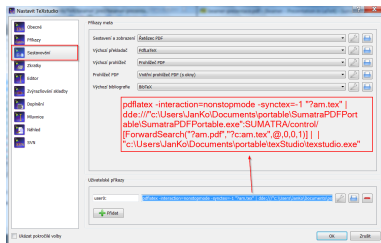

Figure 12 : Setting compilation.

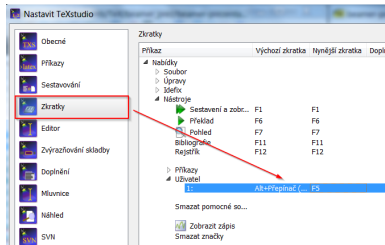

Figure 13 : Setting shortcut F5 for creating PDF.

SumatraPDF

Installation

According me best LaTeX editor.
http://portableapps.com/apps/office/sumatra_pdf_portable-portable-version.

Forward and inverse search

When compile TeX to see actual page. When you click in the pdf document to see related code.

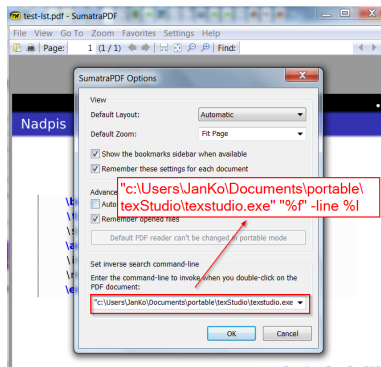

Figure 14 : SumatraPDF - setting inverse search

Another editors

Figure 15 : TeXnicCenter editor.

<http://www.texniccenter.org/>

Figure 16 : BaKoMa - WYSIWYG editor.

<http://www.bakoma-tex.com/>

Philosophy

View output

Compilation

To view output pdf/ps you have to compile *.tex.

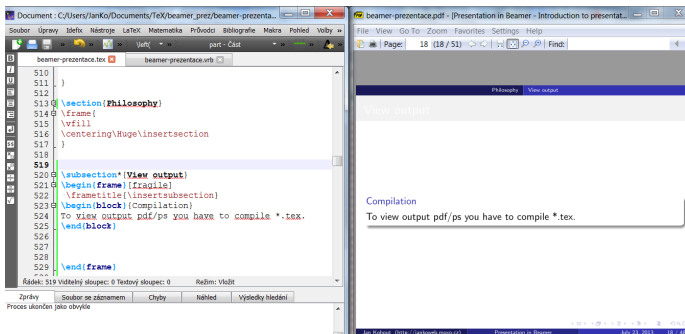

Figure 17 : TexStudio and SumatraPDF

Packages, commands

Packages

To use commands import packages.

```
\usepackage{FILE}
```

Important commands

`\` (backslash) - control char; escape char

`{}` (brackets) - block

`\command`

`\command{parameters}`

`{\command text}`

`%` comment

Examples

α , ϕ , Φ , \times , \neq , \spadesuit

bold

small

```
\alpha, \phi, \Phi
```

```
\times, \neq, \spadesuit
```

```
\textbf{bold}, {\small small}
```

Syntax example

```
\documentclass{beamer}
\usepackage{NAME}
...
\begin{document}

\section{TITLE}
\frame{
  \frametitle{\insertsection}
  \begin{ENVIRONMENT}
    commands/text
  \end{ENVIRONMENT}
  % this is a comment
  Text...
}
...
\end{document}
```

Languages

In czech no problem, but beware of encoding

```
\usepackage [czech] {babel}  
\usepackage [utf8] {inputenc}
```

<http://jankoweb.moxo.cz/blog/skripty/prevadec-rozhazene-diakritiky-pri-kopirovani-z-pdf-vytvoreneho-latexem/>

In english - have to use special syntax - e.g. "Příliš"

```
\usepackage [english] {babel}  
...  
\begin{document}  
P\v{r}\\'{i}li\v{s} ...  
\end{document}
```

Templates

```
\mode<presentation> {
\usetheme{CambridgeUS}\usecolortheme{whale}
}
```

Figure 18 : Beamer templates gallery, hartwork.org.

<http://www.hartwork.org/beamer-theme-matrix/>

<http://jankoweb.moxo.cz/blog/odborny-sw/>

beamer-sablony-a-materialy-k-tvorbe-profesionalnich-prezentaci/

Code examples

"Header"

Figure 19 : Header.

[webstory.my]

```
\documentclass{beamer}
\usepackage{epstopdf} % convert eps to pdf and using pdflatex
\usepackage[english]{babel}
\mode<presentation>{
\usetheme{CambridgeUS}\usecolortheme{whale}
}
\usepackage{url}
```

First slide (setting)

```
\title{Presentation in Beamer}  
\subtitle[pod]{Introduction to presentation in LaTeX}  
\author{Jan Kohout}  
\institute[CTU]{http://jankoweb.moxo.cz}  
  
\newcommand{\supervisor}{}  
  
\newcommand
```

For defining custom commands.

First slide (code)

```

\defbeamertemplate*{my title page}{default}[1][ ] { %
  \vbox{ }\vfill
  \begin{centering}\begin{beamercolorbox}[sep=8pt,center,#1]{tit
    \ifx\insertsubtitle\@empty%
    \else%
      \vskip0.25em%
      {\usebeamerfont{subtitle}\usebeamercolor[fg]{subtitle}\i
    \fi%
  \end{beamercolorbox}}%
  \vskiplem\par\begin{beamercolorbox}[sep=4pt,center,#1]{autho
  \begin{beamercolorbox}[sep=4pt,center,#1]{institute}\usebeam
    \usebeamerfont{supervisor} Supervisor: \supervisor\end{bea
}
\frame{ % MAIN SLIDE
  \usebeamertemplate{my title page}
}

```

Outline, slides

```
\section*{Outline}
\frame{
  \frametitle{\insertsection}
  \tableofcontents
}
.
.
.
\section{TITLE}
\frame{
  \frametitle{\insertsection}
  Text...
}
```

\tableofcontents

Automatically generate outline from section, subsection...

Section, boxes, lists, fonts

Section, subsection

Appears in outline

```
\section{TITLE}  
\subsection{TITLE}  
\subsubsection{TITLE}
```

Not appears in outline - add star

```
\section*{TITLE}  
\subsection*{TITLE}  
\subsubsection*{TITLE}
```

Boxes

Block

```
\begin{block}{TITLE}  
Text...  
\end{block}
```

Alertblock

```
\begin{alertblock}{TITLE}  
Text...  
\end{alertblock}
```

Exampleblock

```
\begin{exampleblock}{TITLE}  
Text...  
\end{exampleblock}
```

List, columns

- text 1
- text 2

```

\begin{columns}

\column{5.5cm}
\begin{itemize}
\item text 1
\item text 2
\end{itemize}

\column{5.5cm}
\begin{enumerate}
\item text 1
\item text 2
\end{enumerate}

\end{columns}

```

- 1 text 1
- 2 text 2

Comparison of Greek Columns: Doric, Ionic, and Corinthian

Figure 20 : Columns.

Font

tiny text small text large text Large text huge text Huge text

```
{\tiny tiny text}
{\small small text}
{\large large text}
{\Large Large text}
{\huge huge text}
{\Huge Huge text}
```

bold, *italic*,

red, green, blue

<http://myweb.cz>

```
\textbf{bold}, \textit{italic},
{\color{red} red}, {\color{green} green}, {\color{blue} blue}
\url{http://myweb.cz}
```

Images, tables, reference

Images

Figure 21 : Image example.

[openwalls.com]

Simply

Setting width, changing image by changing source, auto positioning...

```
\begin{figure} [h]
\centering
\includegraphics [width=6cm] {img/image.png}
\caption{Image example}
\label{fig:image.png}
\end{figure}
```

Tables

Table 1 : Caption

| | | | |
|------|-----|------|------|
| 0 | 705 | 1,48 | 37,9 |
| 0,43 | 683 | 2,43 | 37,7 |
| 0,94 | 661 | 3,46 | 37,4 |
| 1,38 | 644 | 4,33 | 37,2 |

`\label{tab : reference}`

Reference to table. How to use below.

```

\begin{table}[H]
  \centering
  \caption{Caption}
  \vspace{0.2cm}
  \begin{tabular}{|c|l|r r|}
    \hline
    0 & 705 & 1,48 & 37,9 \\
    \hline\hline
    0,43 & 683 & 2,43 & 37,7 \\
    0,94 & 661 & 3,46 & 37,4 \\
    1,38 & 644 & 4,33 & 37,2 \\
    \hline
  \end{tabular}
  \label{tab:reference}
\end{table}

```

Citation, reference

See [2]. According to equation (5).

You can see on figure 5.

```
See \cite{WWW}. According to equation \eqref{eq:example}.
```

```
You can see on image \ref{fig:advantages.png}.
```

Math, source code, Matlab

Math

Expand $(a + b)^n$:

$$(a + b)^n \tag{1}$$

$$(a + b)^n \tag{2}$$

$$(a + b)^n \tag{3}$$

$$(a + b)^n \tag{4}$$

Expand $(a+b)^n$:

```
\begin{eqnarray}
(a + b)^n \\
(a + b)^n \\
(a + b)^n \\
(a + b)^n \\
\end{eqnarray}
```

Equations

Math in text

$$x = 7\alpha + 4\beta$$

```
| $x = 7 \, \alpha + 4 \, \beta$
```

Numbered equation

$$\frac{1}{2}, x_1, x^2, \lim_{s \rightarrow \inf} s, \int_{\min}^{\max} x^2 dx, \sum_{\min}^{\max} \beta = \pi \quad (5)$$

```
\begin{equation}
\frac{1}{2}, x_1, x^2, \lim_{s \rightarrow \inf} s, ...
\int_{\min}^{\max} x^2 dx, \sum_{\min}^{\max} \beta = \pi
\label{eq:example}
\end{equation}
```

Source code

```
\usepackage{color}  
\lstset{language=[LaTeX]TeX}
```

Usage in slides - don't forget "fragile"

```
\begin{frame}[fragile]{Source code}  
\begin{lstlisting}  
code  
\end{...}
```

Many languages supported

See http://en.wikibooks.org/wiki/LaTeX/Source_Code_Listings.

Matlab integration

latex()

Export output directly to LaTeX.

<http://jankoweb.moxo.cz/blog/skripty/>

[matlab2latex-prevadec-ceskeho-retezce-matlabu-do-formatu-latexu/](http://jankoweb.moxo.cz/blog/skripty/matlab2latex-prevadec-ceskeho-retezce-matlabu-do-formatu-latexu/)

File / Publish Configuration

Advanced export - directly to *.tex file. Example and more information

[http:](http://jankoweb.moxo.cz/blog/odborny-sw/matlab-publikovani-m-filu/)

[//jankoweb.moxo.cz/blog/odborny-sw/matlab-publikovani-m-filu/](http://jankoweb.moxo.cz/blog/odborny-sw/matlab-publikovani-m-filu/).

Conclusion

Tips

Labels names

fig: for images, **eq:** for equations, **tab:** for tables.

Vector images (eps)

`\usepackage{eps2pdf}`

Macros

Shortcuts, macros, symbol tables...

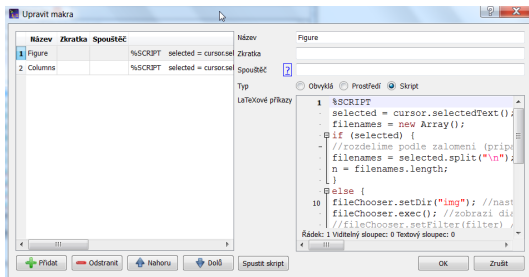

Figure 23 : Macros in TexStudio

Debugging

Code examples

Citation, reference

See [2]. According to equation (??).

Figure 24 : Bad reference or first compilation.

Frequent errors

- forgotten `\usepackage`
- forgotten end of brackets `}`
- forgotten `\end{environment}`
- using `"_"` in text mode
- using special chars in text mode
- using math symbols in text mode

Tip

Often compiler report error at another place that occurs. You don't know nothing form error message? Google it.

Debugging II

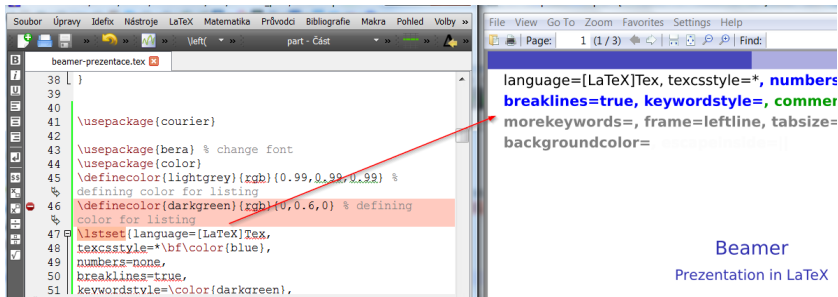

Figure 25 : Forgotten usepackage.

Summary

Quick start

- MikTeX
- TeXStudio
- SumatraPDF

Steps for presentation in PDF

Editor → *.tex file → PDF

*.tex Beamer template
